

Land Cover CCI

Current status and achievements

Project highlights

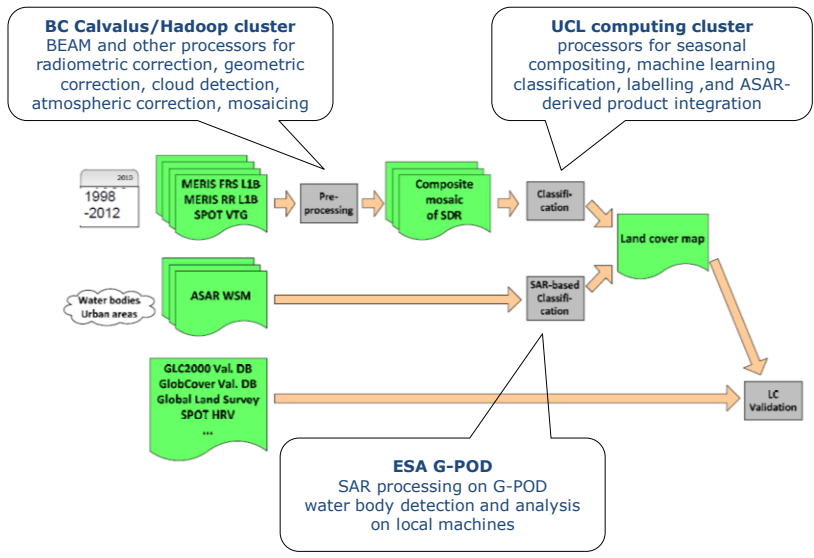

- **Delivery of the first prototype of the CCI LC map in August 2012**
- **Intensive production period** (preprocessing, classification and compilation)

=> Delivery of the CRDP 1.0 (except the LC_CCI Water condition)

- ✓ **7-d Surface reflectance for the whole MERIS FR and RR archive**
 - ✓ **Land cover states for 3 epochs**
 - ✓ **Land cover conditions for Snow, Burnt Areas, Greenness (NDVI)**
 - ✓ **Permanent Water bodies map**
 - ✓ **Aggregation tool** (to convert LC map to gridded PFT)
- **GOFC-GOLD symposium – April 2013 in Wageningen**
 - Presentation of the project and its products
 - Announcement of the validation process and call for experts

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa
Diagram of the prototype system

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

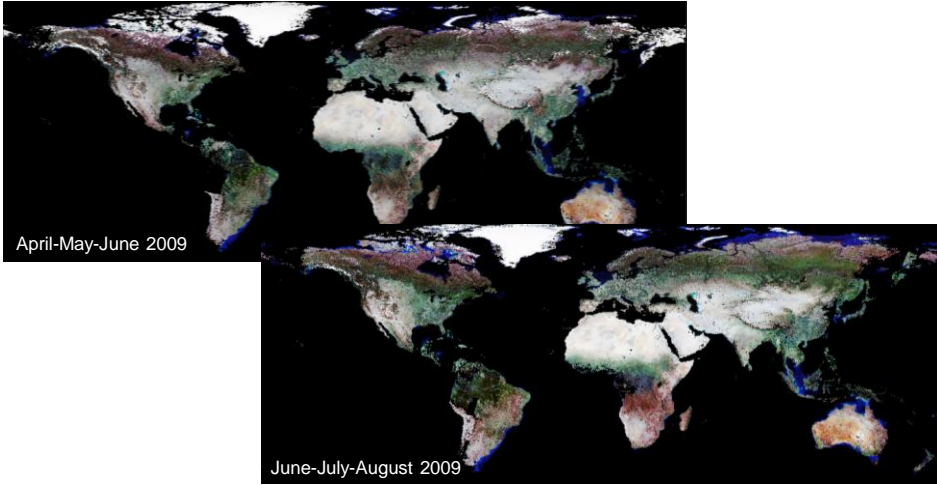

esa
Delivery of CRDP (1/5) : 7-d MERIS surface reflectance

MERIS FR & RR 7-day composites
SR time series from 2003 to 2012
 5° x 5° tiles in NetCDF format and quality flags

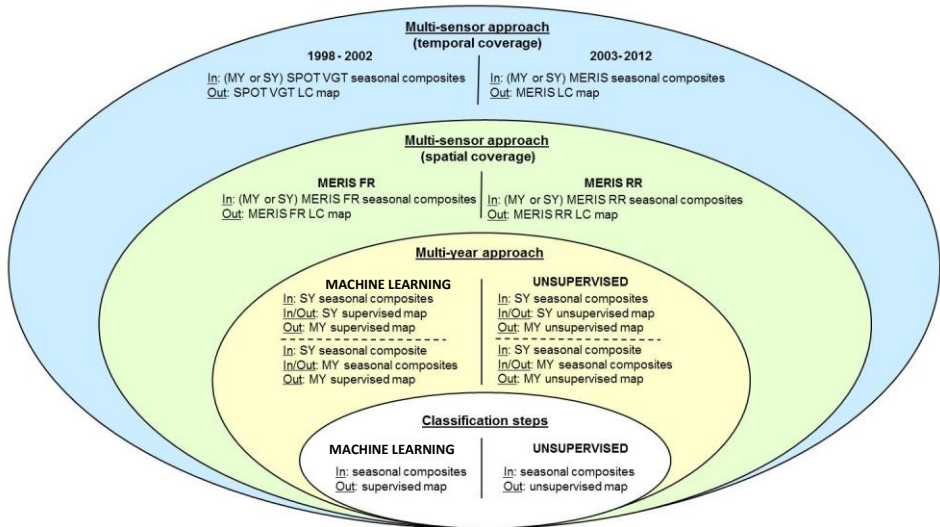

MERIS FR global 7-day composite (2009-04-02 to 2009-04-08)

Classification input : seasonal and multi-year composites

Generation of seasonal composites, i.e. composites characterized by longer compositing periods defined on a per-stratum basis

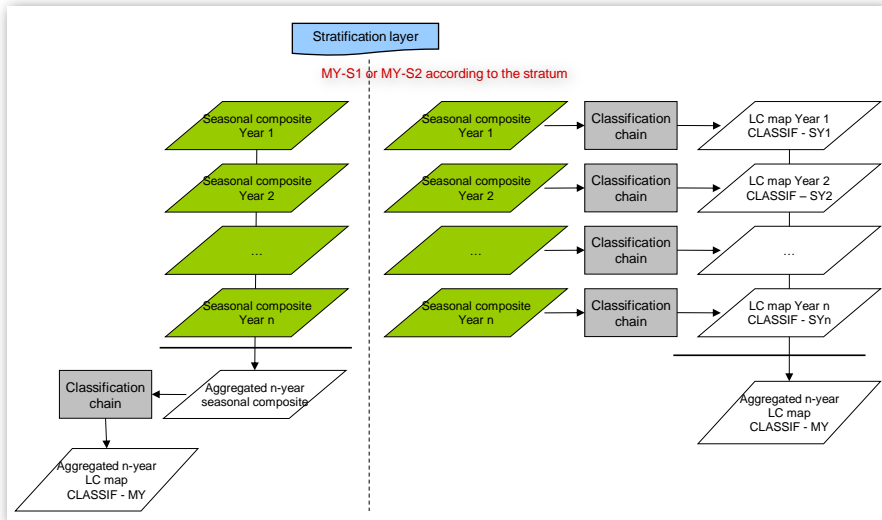

Overall classification strategy

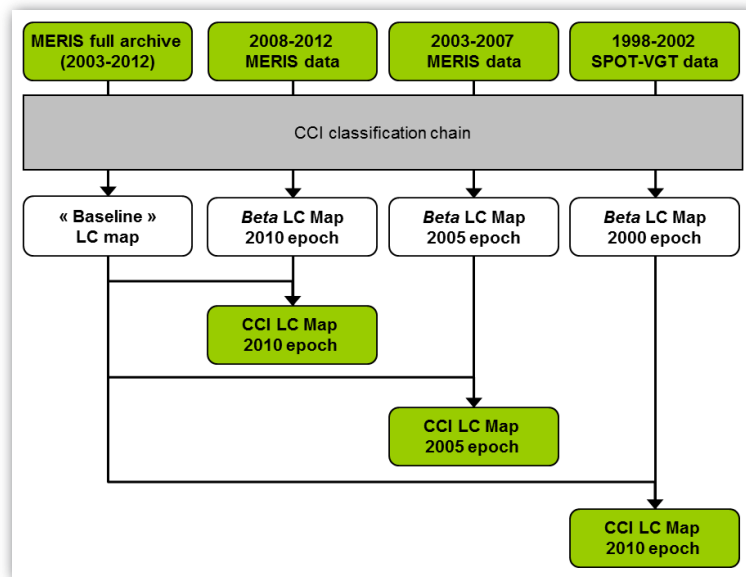

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa Multi-year approach (1/2) 

3rd CMUG Integration Meeting, MPI-Hamburg - 3-5 June 2013

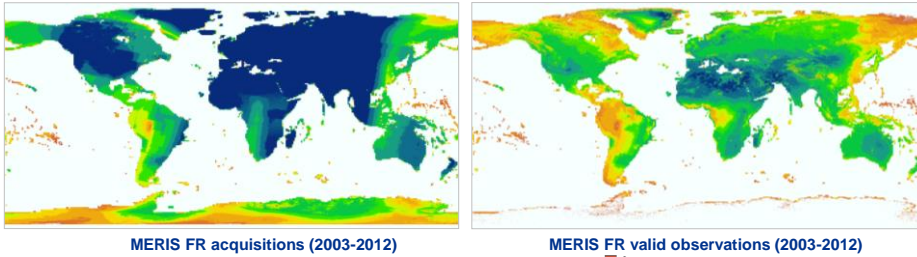

esa Multi-year approach (2/2) 

3-5 June 2013

esa Multi-sensor approach 

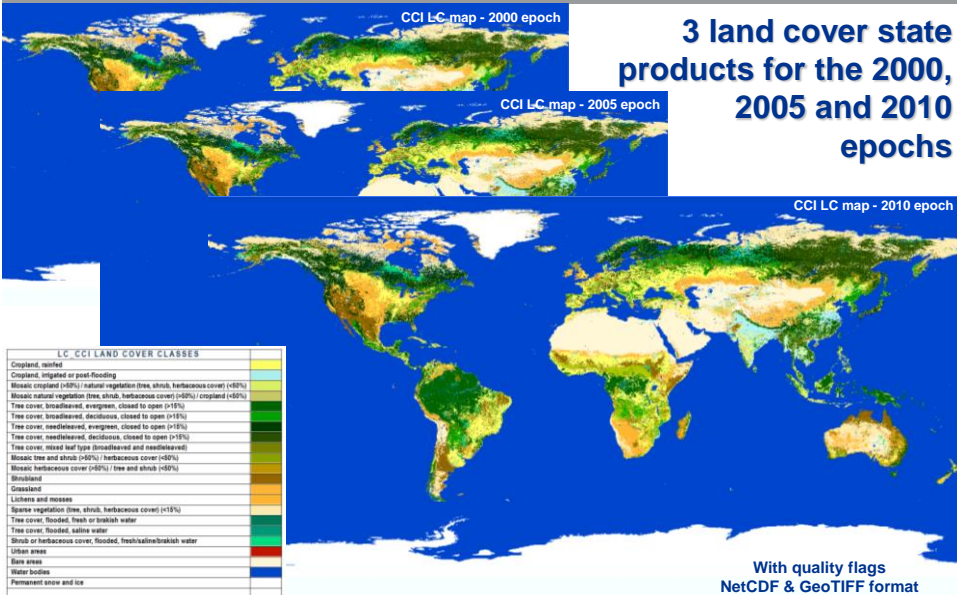

- MERIS RR used to complement the « baseline » MERIS FR LC map

- SPOT-VGT used to derive the 2000 epoch LC map (at 300m spatial resolution inherited from the « baseline » LC map)

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa Delivery of CRDP (2/5) 

esa
LC state products : quality flags

- Land
- Water
- Snow
- Cloud
- Invalid

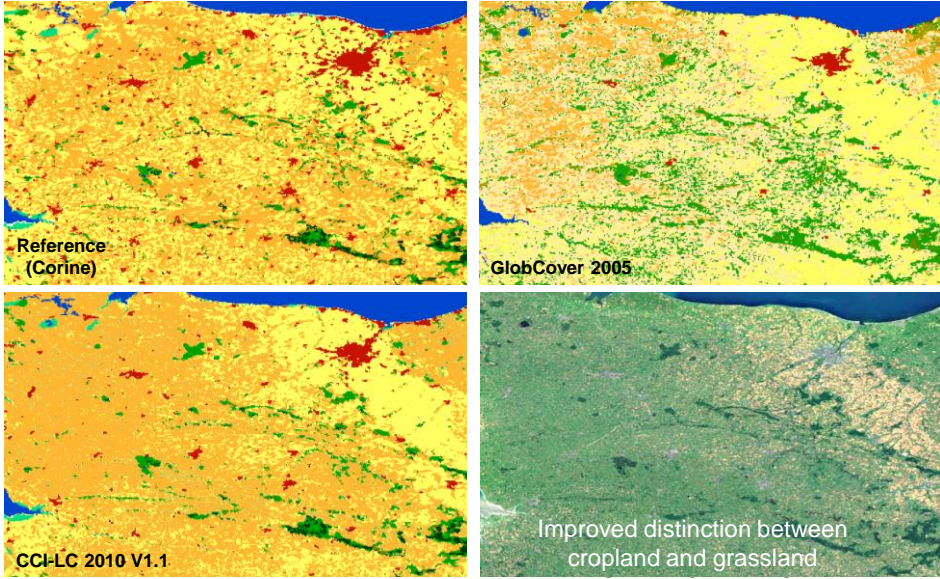

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa
2010 Epoch – France (1)

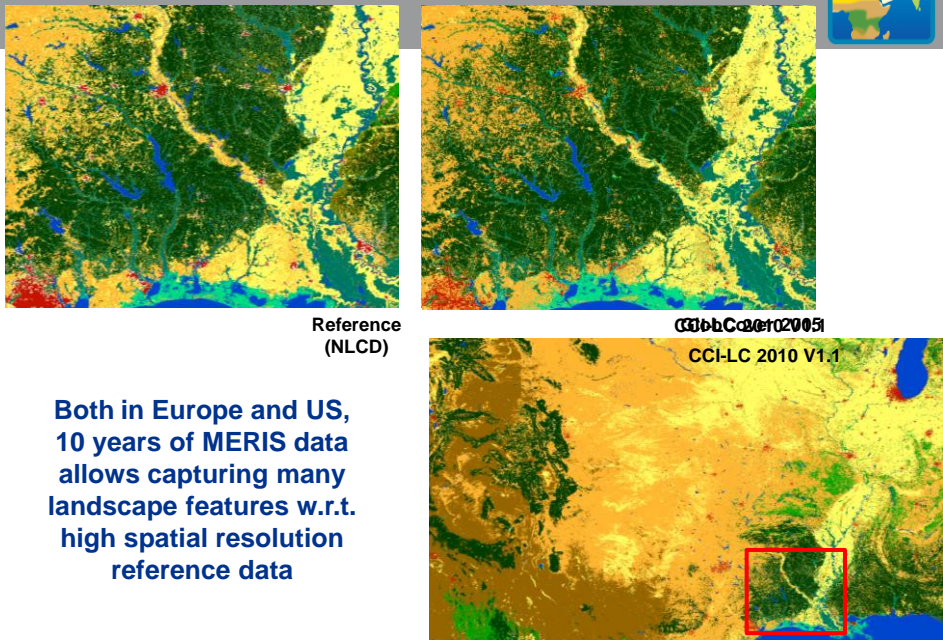

MPI-Hamburg - 3-5 June 2013

esa 2010 Epoch – France (2) 

esa 2010 Epoch – US 

Both in Europe and US, 10 years of MERIS data allows capturing many landscape features w.r.t. high spatial resolution reference data

esa 2010 Epoch – Amazon

- Improved detection of:
- wetlands due to an improved supervised approach
 - deforestation due to the multi-year approach

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa 2010 Epoch – Deforestation

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa 2010 Epoch – Japan 

Improved spatial consistency

High level of spatial detail

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa 2010 Epoch – South & Southeast Asia 

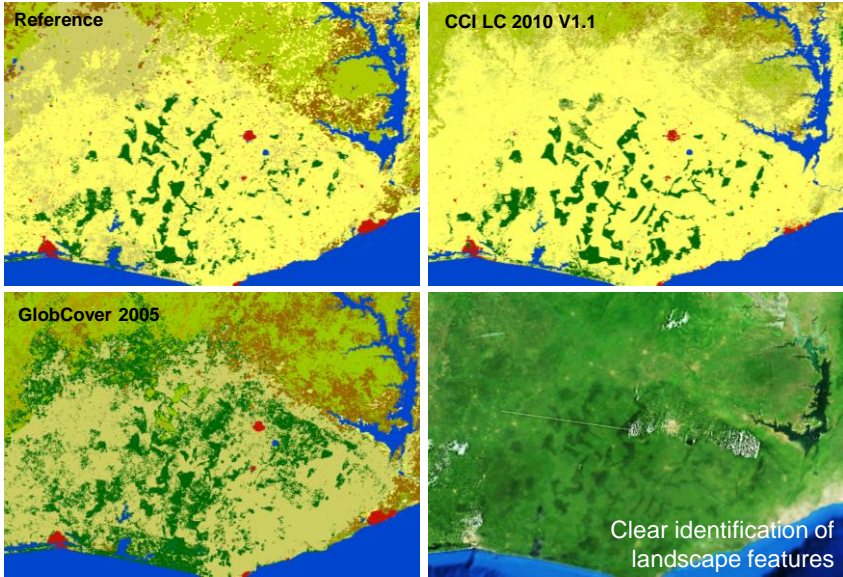

High contamination with irrigated cropland:

- out-of-date reference data (GLC2000)
- absence of temporal classification

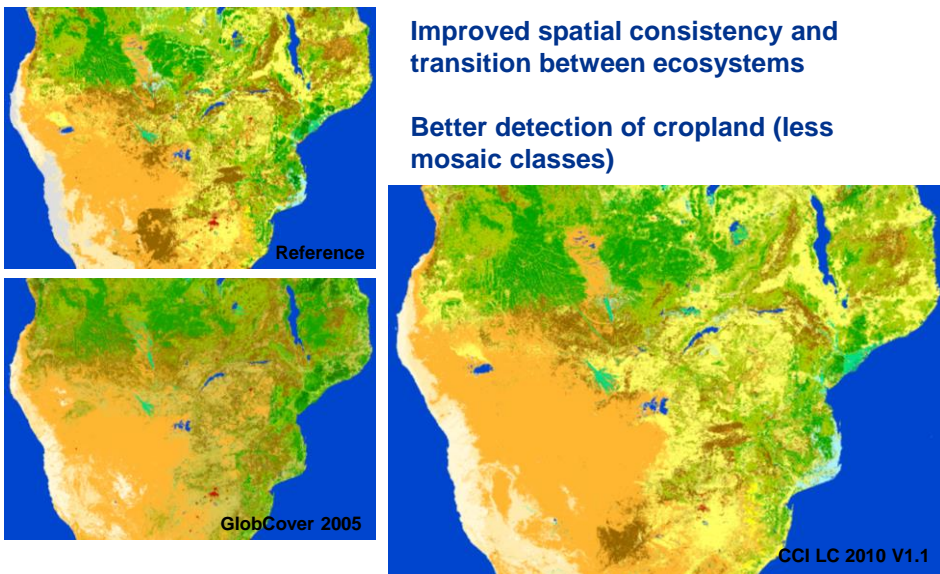

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa 2010 Epoch – Central Africa

esa 2010 Epoch – South Africa

2010 Epoch – South Africa

High spatial accuracy of the mapping thanks to high quality of input data (pre-processing + multi-year approach)

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

2005 and 2000 epochs

- **Backdating from the « baseline » map**
- **Only applied to some classes yet**

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

LC state products: current status

- Clear improvement in some areas and for some thematic features but still to be validated quantitatively
- Unlike the fully automated approach GlobCover, the LC_CCI classification processing chain opens many possibilities in terms of input and method combinations
- Still room of improvement:
 - Classification parameters tuning (e.g. Asia)
 - Multi-year approach for backdating to be further applied
 - Multi-sensor integration

3rd CMUG Integration Meeting, MPI-Hamburg - 3-5 June 2013

Delivery of CRDP (3/5) : LC conditions

3 land cover condition products over the 15-year period 1998-2010
(Water still to be delivered)

With quality flags
NetCDF & GeoTIFF format MPI-Hamburg - 3-5 June 2013

LC condition concept

LC-state : forest and croplands

LC-condition : snow

Instantaneous observations

Snow condition product

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

Sources for LC conditions

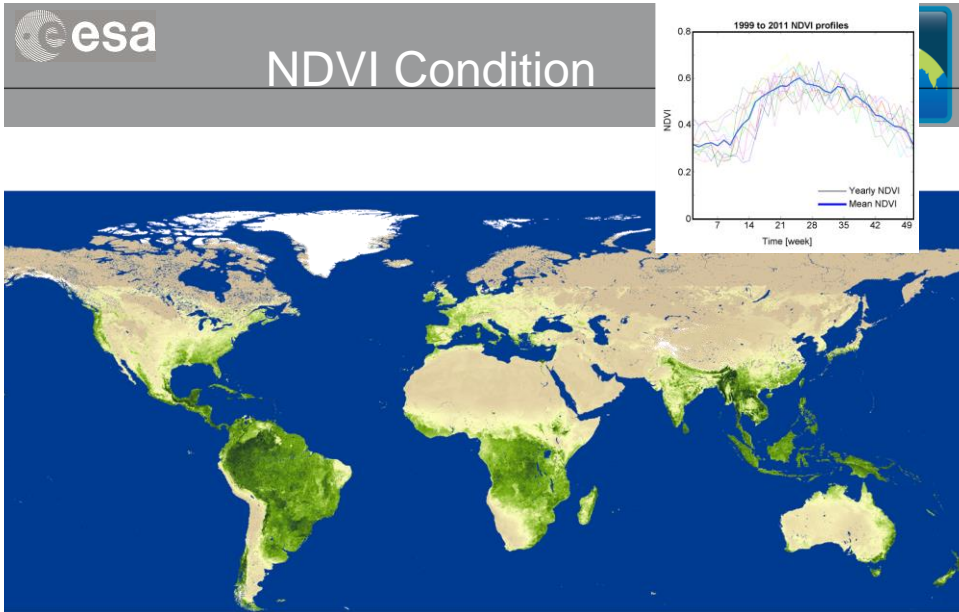

- Built from existing global datasets with high temporal frequency and long-term data sets
- The condition is a compilation of time series to derive 'climatological records' (average year and inter-annual variability) from 13 years of 7-d composite time series

Condition	Input dataset	Spatial resolution	Temporal coverage
NDVI	SPOT-VGT	1km	1999 – 2011
BA	MCD64A1	500m	2000 – 2012
Snow	MOD10A2	500m	2000 – 2012
Water	SPOT-VGT	1km	1999 – 2011

Not yet delivered

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

NDVI - 101

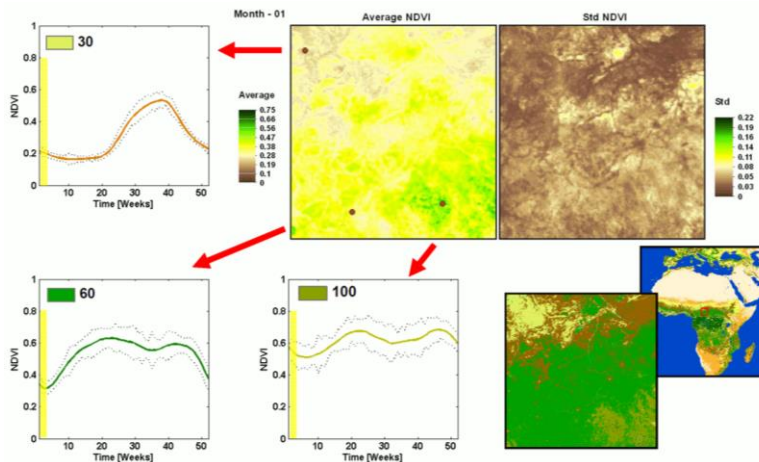

Verheggen et al. 2012

3rd CMUG Integration Meeting, MPI-Hamburg - 3-5 June 2013

30 : Mosaic cropland (>50%)

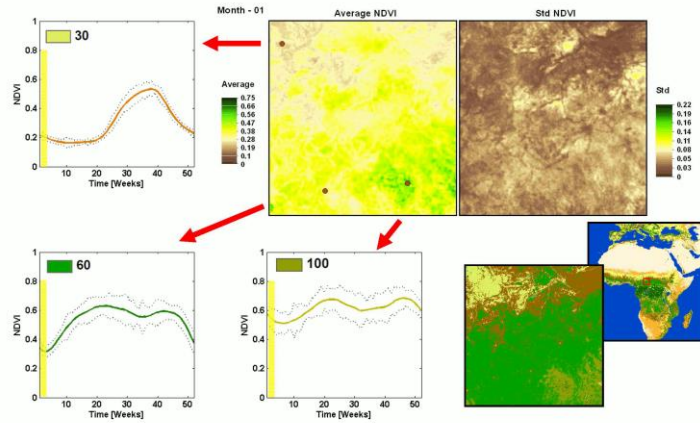

60 : Tree cover, broadleaved deciduous, closed to open (>15%)

100 : Mosaic tree and shrub (>50%)

3rd CMUG Integration Meeting, MPI-Hamburg - 3-5 June 2013

esa NDVI Condition 

 30 : Mosaic cropland (>50%)

 60 : Tree cover, broadleaved deciduous, closed to open (>15%)

 100 : Mosaic tree and shrub (>50%)

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa Snow condition 

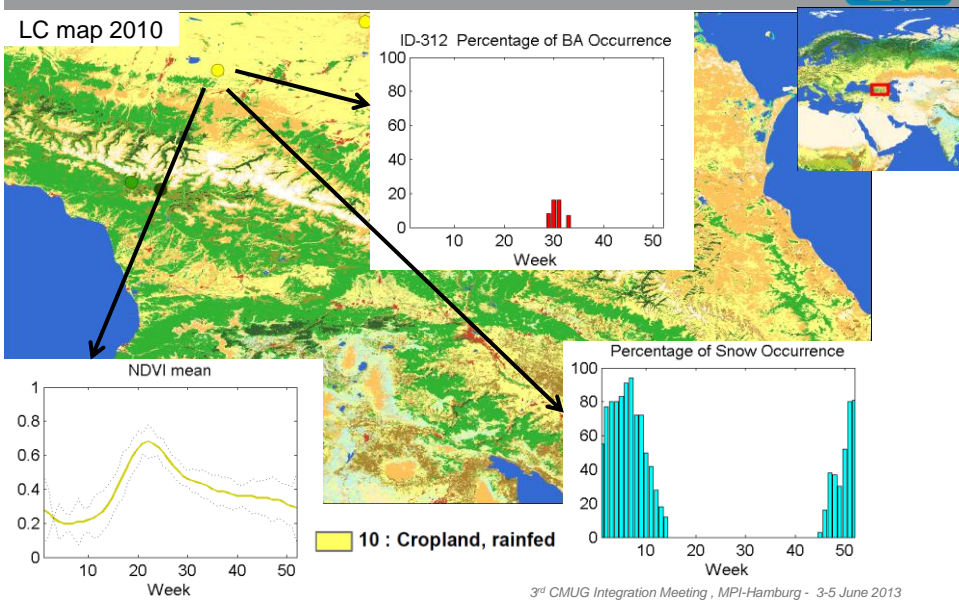

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa Variety of NDVI and Snow conditions
Caucase (1)

esa High condition seasonality
Caucase (2)

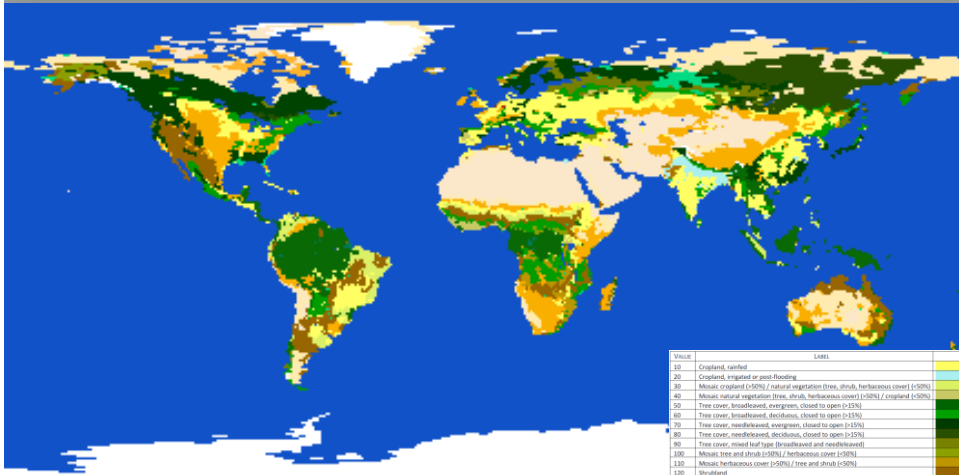

esa Delivery of Aggregation tool for Spatial conversion and PFT conversion

- **Subsetting**
 - Free specification of regional subset (4 corner coordinates)
- **Reprojection**
 - Original projection (Plate-Carrée)
 - Gaussian grid
 - Rotated lat/lon grid
- **Resampling**
 - Original resolution
 - 0.25 degree, 0.5 degree, 1 degree, 1.875 degree
 - 1.875 x 1.25 degree
 - 3.75 x 2.5 degree
- **PFT conversion**
 - with default table
 - with user-defined table

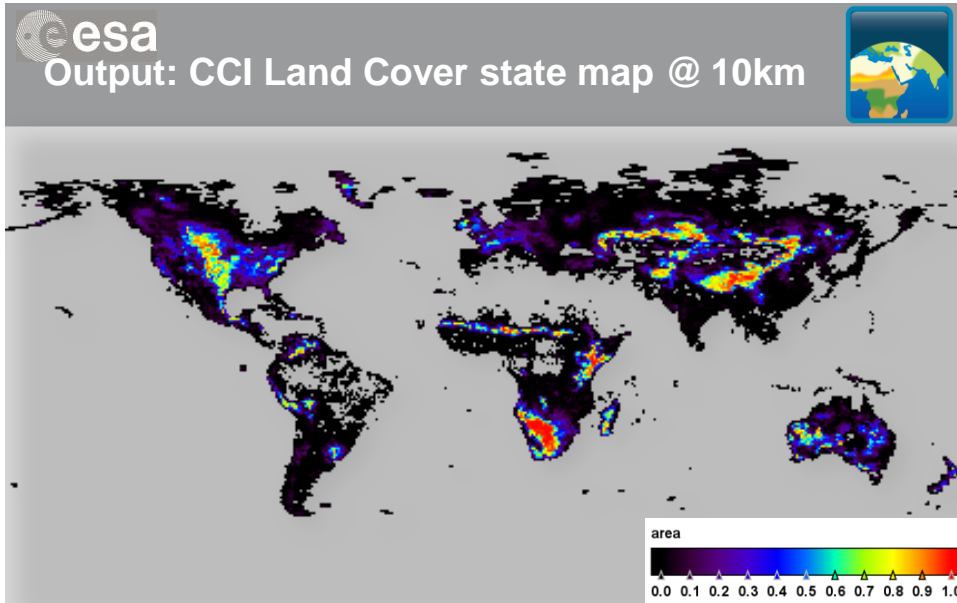

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa Output: CCI Land Cover state map @ 10km

- CCI land cover state map for the epoch 2008-2012
- aggregated ~9.8km/ pixel
 - majority class 1

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

CCI land cover state map for the epoch 2008-2012

- aggregated ~9.8km/ pixel
- area of CCI LC class – 130 – grassland

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

**Global permanent water body product derived from
Envisat ASAR archive between 2005 - 2010**

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

SAR WB Indicator a land/water classification layer

3rd CMUG Integration Meeting, MPI-Hamburg - 3-5 June 2013

SAR WBI visual assessment (1)

based on a comparison against HR imagery

- High density of SAR data ($> 60^{\circ}\text{N}$) allows high quality classification

Bing Maps

SAR WBI Land Water

esa SAR WBI visual assessment (2)
based on a comparison against HR imagery

- Great quality in many places – example in the Netherlands

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa SAR WBI visual assessment (3)
based on a comparison against HR imagery

Eskimo Lakes - Northwest Canada

- Some issues, for instance where glaciers are considered as land
- Above 60° N SAR-WBI performs much better than MOD44W and GLWD

Bing Maps

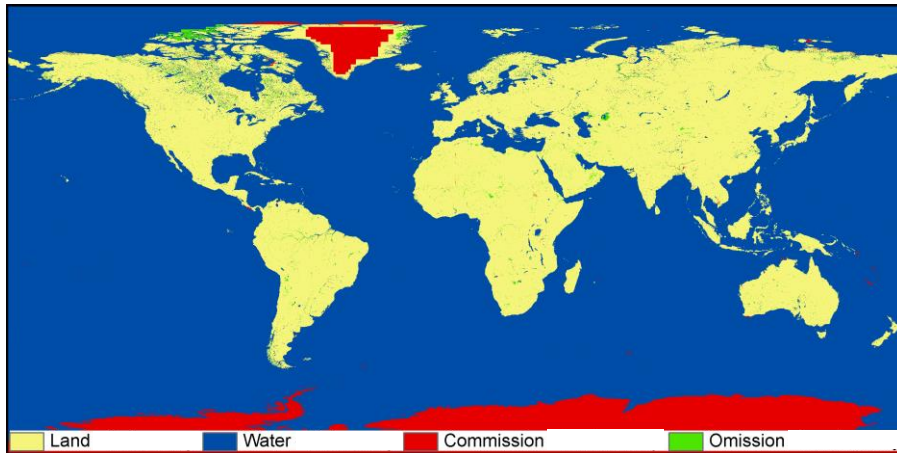

GLWD I (turquoise) & II (purple)

June 2013

esa Discrepancy assessment (2)

- Layer of potential discrepancies

3rd CMUG Integration Meeting, MPI-Hamburg - 3-5 June 2013

esa Consolidation examples

Improve coastline delineation

3rd CMUG Integration Meeting, MPI-Hamburg - 3-5 June 2013

esa Consolidation examples
Improve coastline delineation

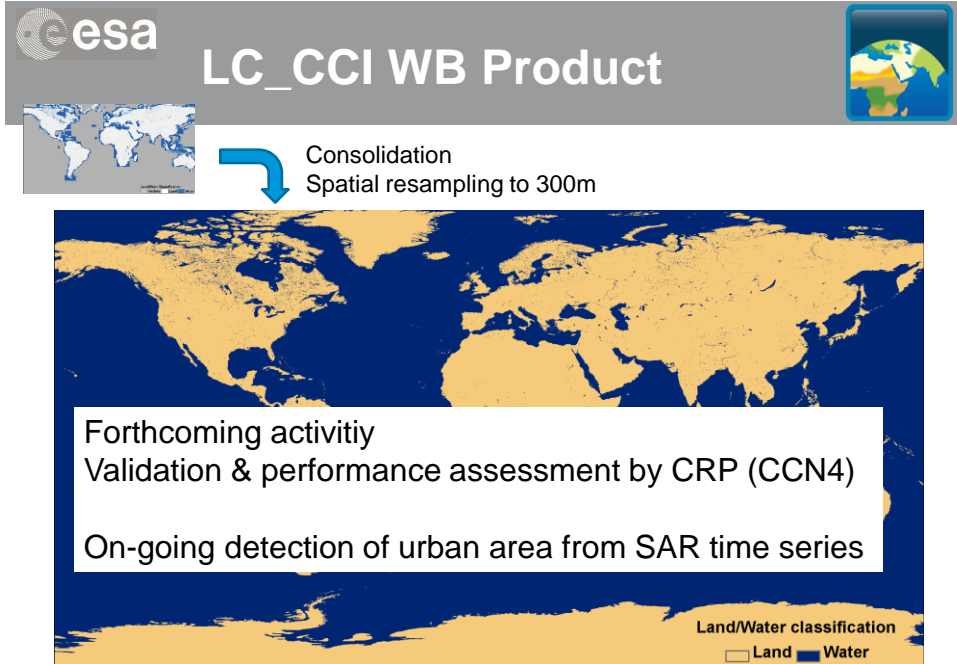

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

esa Consolidation examples
Remove false detection in mountain areas

3rd CMUG Integration Meeting , MPI-Hamburg - 3-5 June 2013

3rd CMUG Integration Meeting, MPI-Hamburg - 3-5 June 2013
