INSTITUTE OF SCIENCE  
AND TECHNOLOGY

**LIST**

***“Use LST data to construct a multi-sensor L4 product and evaluate the performance of the regional climate model (RCM) HIRHAM5 in calculating the surface energy budget over the Greenland ice sheet and in determining the extent of surface melt”***

DMI

Danish Meteorological Institute

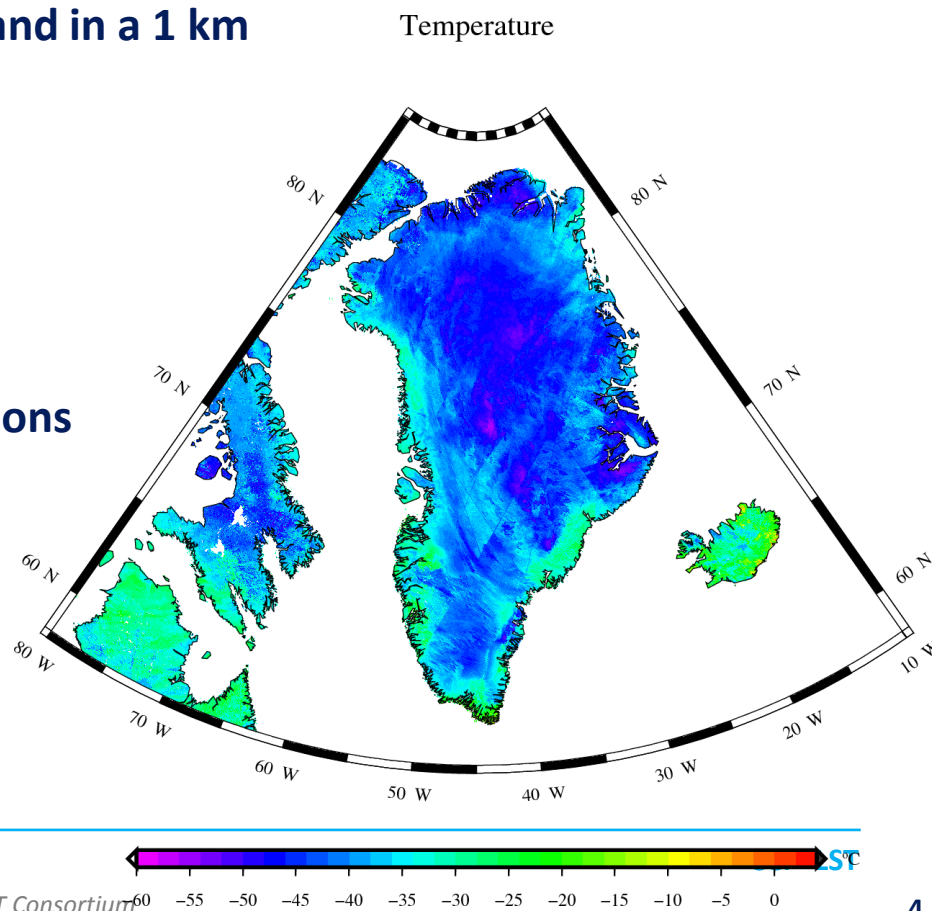

# TASKS

- **Validation of level 2/3 IST products**
- **Preparation of level 4 IST data set**
- **Evaluation of HIRHAM5 regional climate model surface temperature.**
- **Snowpack model simulations**
- **Reporting and article writing**

- **L2 orbit data downloaded from CEMS for year 2012**
  - AATSR
  - MODIS
  - AVHRR GAC, AASTI (DMI)
- **L4 processing chain set up for Greenland in a 1 km resolution**
- **Test runs conducted**
  - L2 -> L3 (L3S)
  - L3 -> L4
- **Validation against IceBridge observations**
- **Full year 2012 L4 data set completed.**

DMI  
Danish Meteorological Institute

# L2 -> L3 -> L4 SATELLITE IST

2012010912

Temperature

AASTI GAC

MODIS

AATSR

Level 4

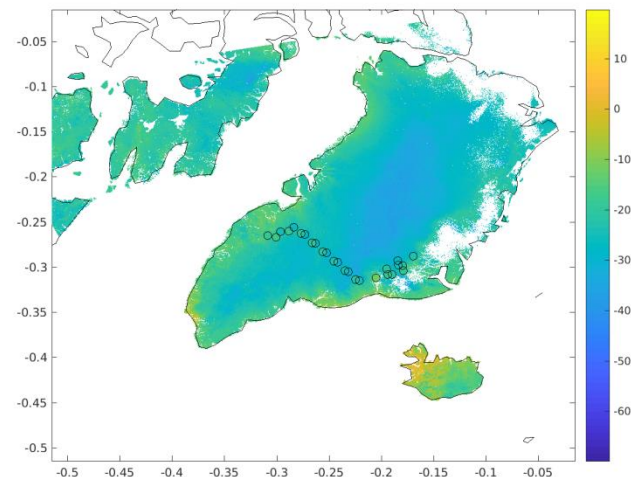

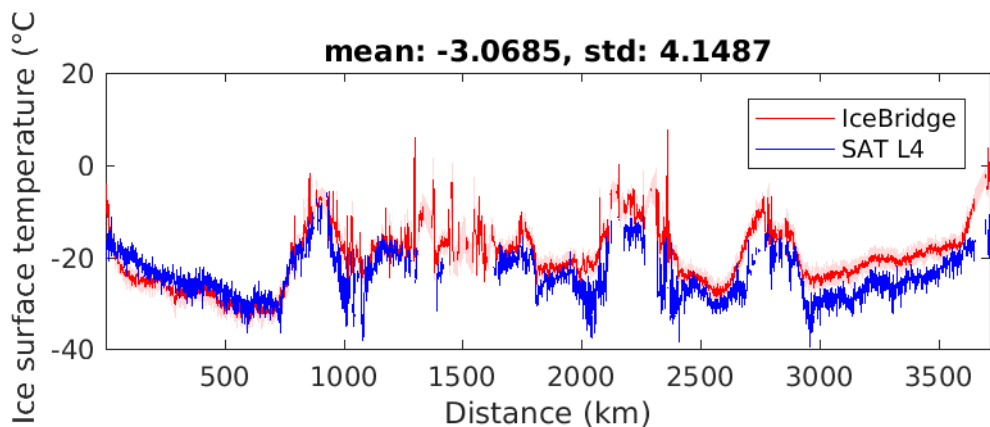

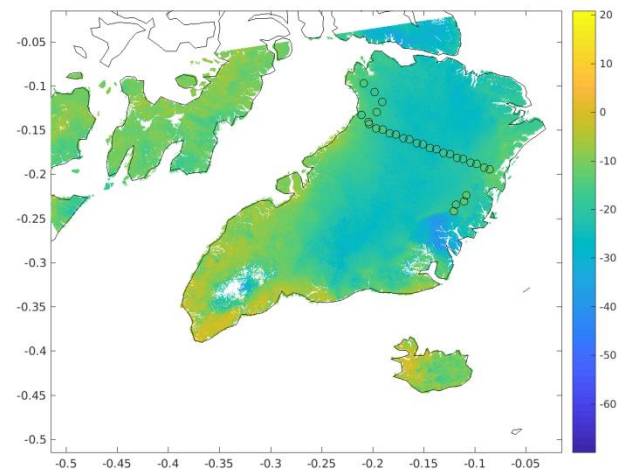

- Operation Icebridge
  - Airborne measurements
  - KT19 radiometers with surface temperature
  - Snapshots during one day
  - Campaign: April-May, 2012

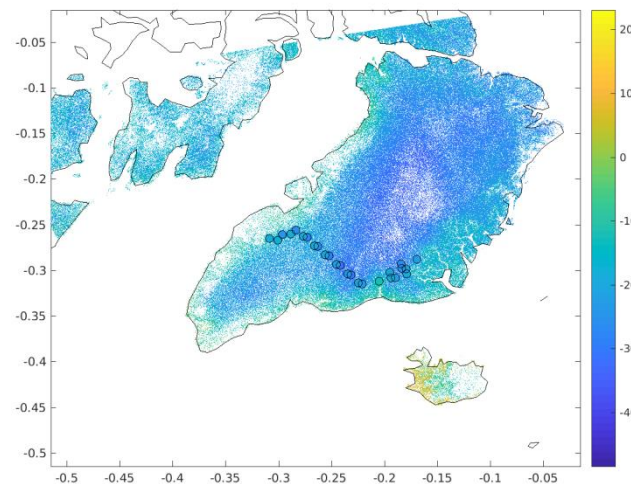

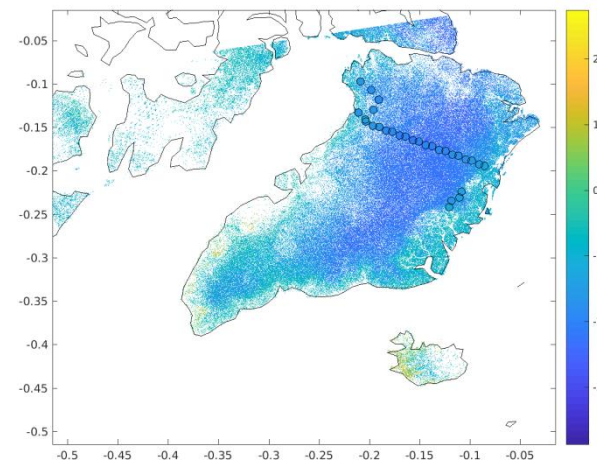

# MODIS LEVEL 3 VALIDATION

# AVHRR GAC VALIDATION

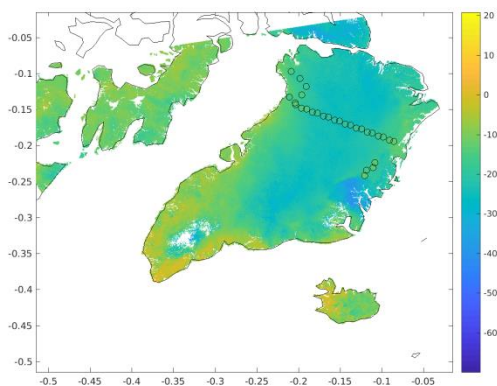

# LEVEL 4 VALIDATION

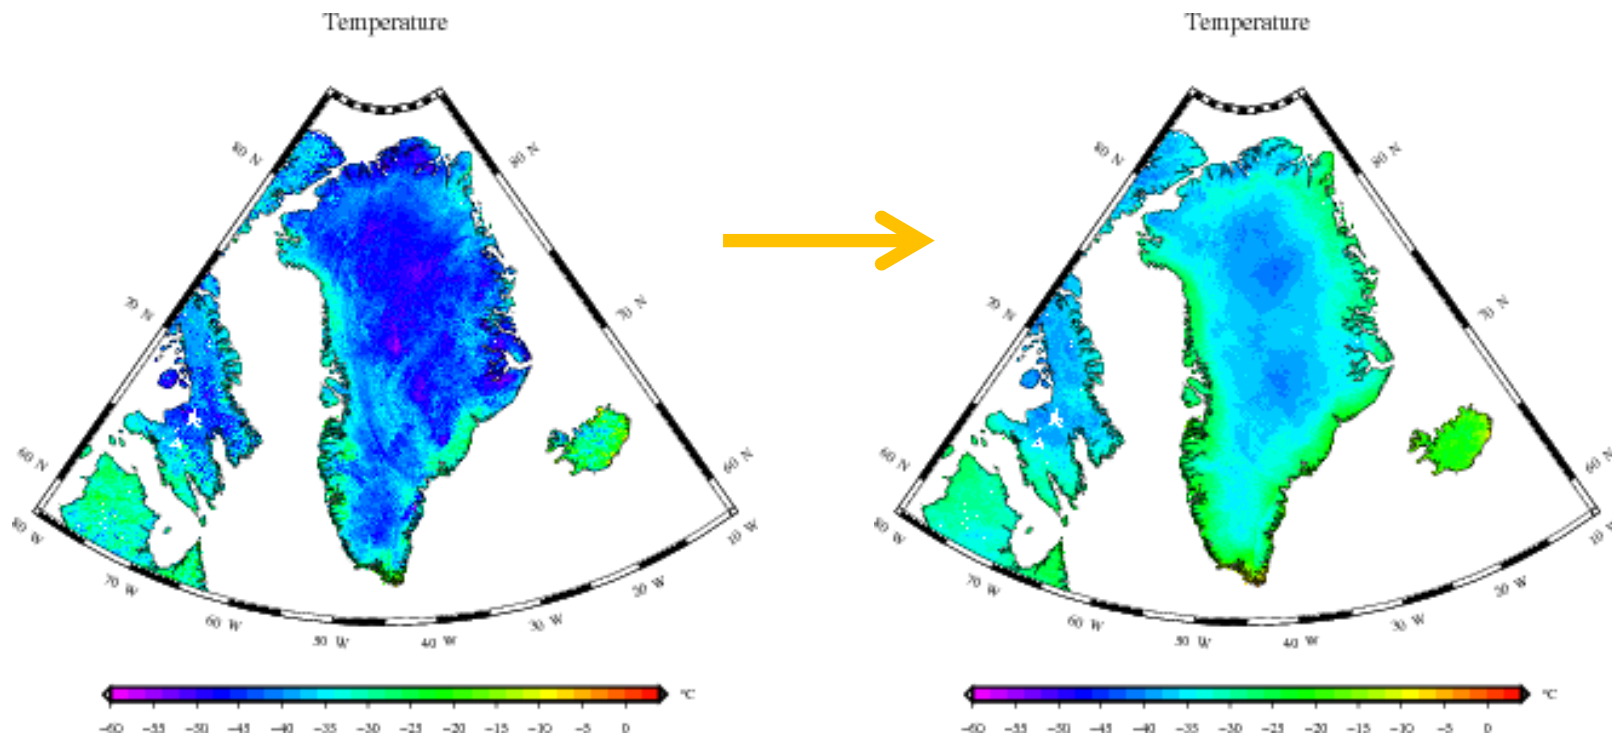

- Several testruns (Modis + AVHRR GAC
  - No adjustment
  - Adjustment to AVHRR GAC
  - Further validation against Promice observations

# LEVEL 4 SETUP

- Spatially varying background errors
- 0.01 deg lat, 0.02 deg lon
- Daily estimates of skin surface temperatures
- Dynamical referencing towards AASTI AVHRR GAC observations
- Leave out AATSR LST observations

DMI  
Danish Meteorological Institute

# REGIONAL CLIMATE AND SURFACE MASS BALANCE MODELLING

**HIRHAM5: Combination of HIRLAM8 dynamics and modified ECHAM5 physics**

**31 levels in the atmosphere; 5km standard horizontal resolution**

**Surface Mass Balance based on full surface energy balance includes retention, refreezing and firn aquifers**

**MODIS albedo already assimilated over glaciers as well as internal albedo scheme**

**Offline firn and surface mass balance model with 60 layers down to 100m w.e., snow densification, age related albedo, retention and refreezing parameterisations**

**Simulation output available to download from:**

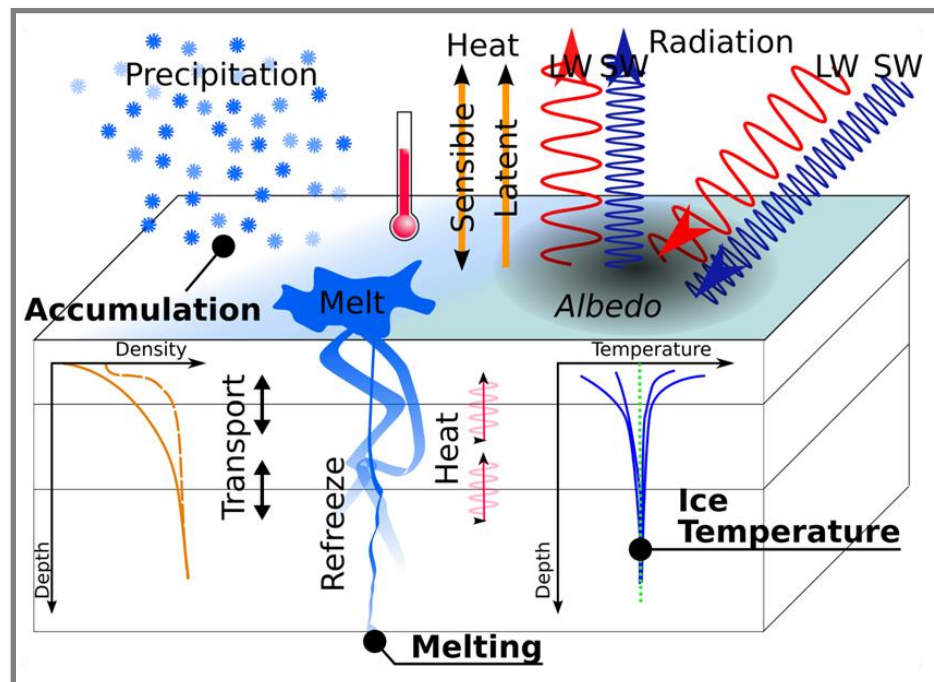

**<http://prudence.dmi.dk/data/temp/RUM/HIRHAM/GL2/>**

Assess differences in TSURF between  
HIRHAM + HIRHAM-LST

Assess model performance with  
Promice/GC-NET observations

## Other planned applications:

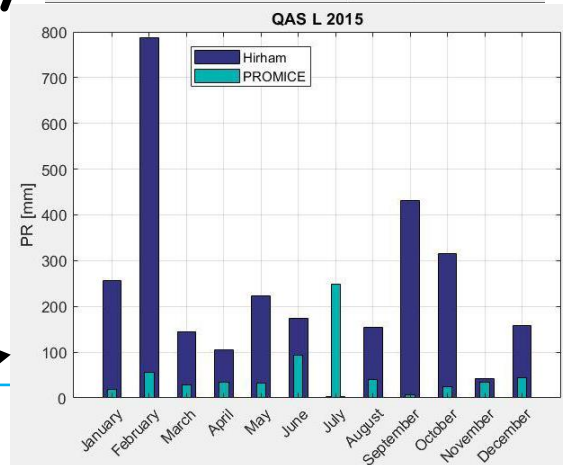

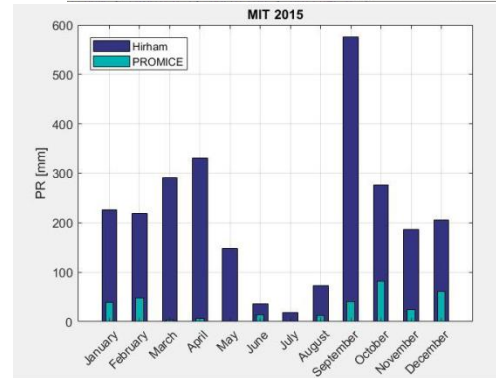

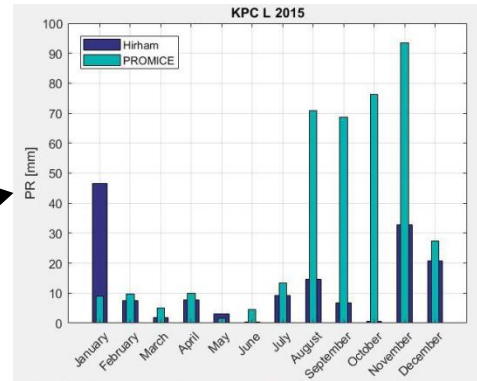

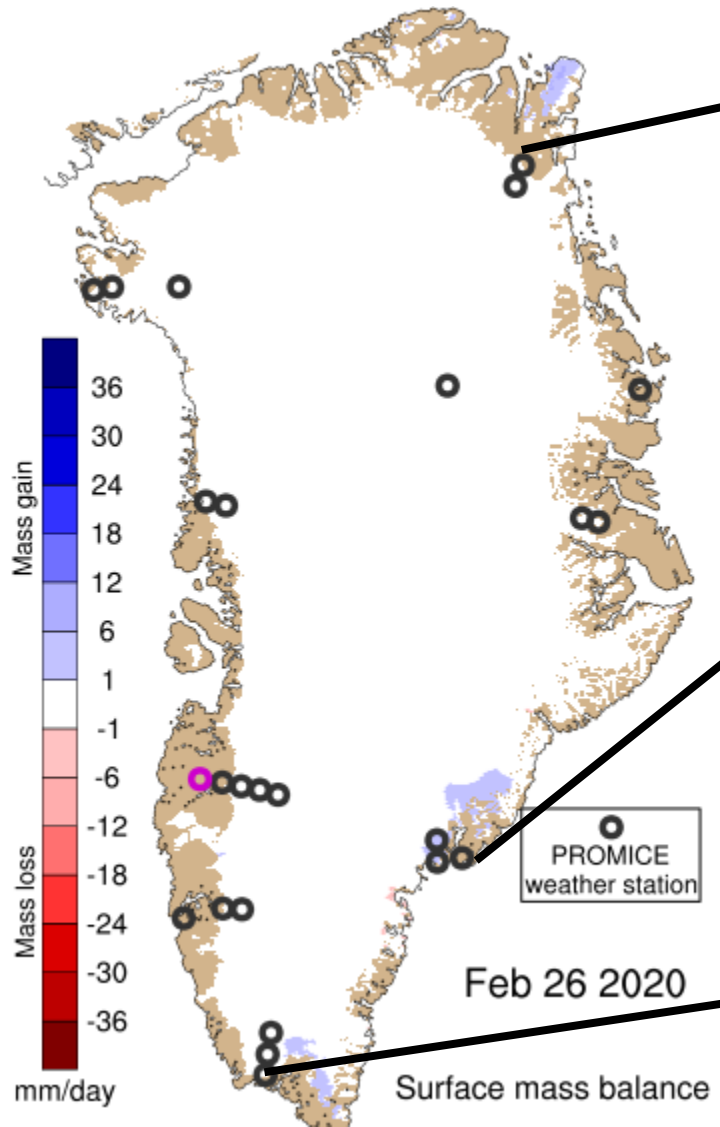

Vegetation + permafrost dynamics (CENPERM)

Hydropower planning (Asiaq)

Possible fire risk project in planning stages

# SELECTED PROMICE STATIONS

1: solar and infrared radiation, 2: tilt sensor, 3: satellite antenna, 4: wind speed & direction, 5: snow/ice surface height, 6: air temperature & humidity, 7: ice ablation 'toss', 8: solar panel, 9: data logger, barometer and GPS, 10: battery, 11: ice temperature profile (8 levels)

- **Validate full year of L3 and L4 products**
- **Evaluation of HIRHAM5 regional climate model surface temperature.**
- **Implementation of LST observations into HIRHAM model**
- **Snowpack model simulations**
- **Reporting and article writing, submit paper end of 2020**

DMI

Danish Meteorological Institute

# CONCLUSIONS

- **Nice and easy to use satellite products from LST CCI**
- **Could be nice with documented uncertainties**
- **(A)ATSR observations more challenging due to low sampling and diurnal variability in T<sub>skin</sub>**
- **Need for documented validation and harmonization of different satellite products and CDRs**

DMI

Danish Meteorological Institute

# CONCLUSIONS

# Thanks, Questions ?
